UNDER VEHICLE SEARCH MIRRORS

Reduces the personal exposure of security personnel rather having to place themselves dangerously close to possible explosive devices. Allows security and tactical personnel to search explosives, prohibited items which are concealed under vehicles.

- ✓ Use of search mirrors promotes safe practice by reducing the personal exposure of security operators and personnel having to place themselves dangerously close to possible explosive devices and risks.
- ✓ Allow security and tactical personnel to search of explosives, prohibited items, which are concealed under vehicles, as well as for examining difficult overhead compartments
- ✓ Provides safety from direct line of fire of armed suspects.
- ✓ The product is built with durability, lightweight non-rotational aluminum poles, padded forearm rests thus provides easy and operational flexibility.
- ✓ Used by a variety organizations including police forces, military organizations, fire departments, airport security, nuclear facilities and border guards
